Keysure is a pilfer-proof, tamper-evident keyless lockbox. The only non-electronic security device that will both physically control and audit the use of a key or password. Once an item is secured inside a Keysure, it must be physically broken to access the contents, providing physical accountability and an audit trail.

Drawer Cabinet**

24" x 24" x 8" high  
150 UNIT CAPACITY

**#C18157 Wall  
Cabinet**

18" x 15" x 7" deep  
100 UNIT CAPACITY

Keysure eliminates the liability of leaving a key with someone by acting as like a security seal. In the same way that a broken seal on a food or drug container suggests its contents have been tampered with, Keysure works as a pilfer-proof, tamper-evident container to be broken and opened on an as-needed basis. SIGNATURES AND IDENTIFICATION are written on both the front and back labels and act just like a signature endorsement on a check. For those drawers or boxes full of odd keys, some of which you have no idea what they are for, Keysure is the solution. Keysure allows one to put important keys into a container specifically designed to protect the key, and gives that key a voice by outwardly identifying the contents inside. **Keysure protects: keys, credit cards, alarm codes, pin numbers, access control cards, safe combinations, IT passwords, data keys, memory cards, usb flash drives, and confidential information.** No other product can offer this versatility to such a wide range of users and at a price anyone can afford.
